

Environmental Policy

This policy applies to Sojitz SOLVADIS GmbH (the "Company"). This Policy covers all employees, directors, managers, and contractors and serves as a guiding framework for our interaction with suppliers, business partners and stakeholders. All persons and entities within its scope are expected to comply with the principles and requirements set forth herein.

1. Our Commitment

As a participant in the chemical supply chain, Sojitz SOLVADIS GmbH recognizes its heightened responsibility toward human health and the environment. We are committed to running our business responsibly and sustainably, taking into account our full impact on the environment and working to improve our performance on topics like energy consumption and greenhouse gas emissions (GHG emissions), water consumption and discharge, air pollution and waste management. We act according to the principles of the Responsible Care Initiative (RCI) of the European chemical industry. We work to get a more sustainable distribution of our products and to minimize the ecological footprint of our chemical operations.

2. Core Principles

Safety & Compliance: We strictly adhere to international regulations, including REACH, CLP, and local hazardous material laws, ensuring the highest standards of safety during storage and transport.

Risk Prevention: We prioritize the prevention of chemical spills, leaks, and soil contamination through state-of-the-art infrastructure and rigorous monitoring.

Continuous Improvement: We set medium- and long-term environmental targets to reduce the impact of our logistics and chemical handling processes.

3. Strategic Environmental Objectives

Safe Chemical Management: We provide comprehensive Safety Data Sheets (SDS) and technical support to ensure our customers use and dispose of our products responsibly.

Sustainable Logistics: We optimize transport routes and load factors to reduce emissions. We prefer logistics partners with "Green Fleet" certifications.

Spill & Waste Management: We maintain a zero-tolerance approach to accidental releases and implemented preventive and response measures to mitigate environmental risks. We are committed to minimizing waste generation, reducing hazardous waste, and preventing air pollution through responsible operational practices, and ongoing improvement of our environmental performance.

Eco-Friendly Portfolio: We actively seek to include "green chemistry" alternatives (biodegradable or less toxic substances) in our product range.

4. Quantitative Targets

Our targets are fully aligned with strategic goals and priorities of our ultimate parent company Sojitz Corporation, Tokyo, Japan:

- Achieve carbon neutrality by 2050 (net zero);
- Reduce GHG emissions 20% by 2030 (baseline 2023)

5. Responsibility & Communication

A dedicated sustainability manager (Sustainability Manager) has been appointed by management for Sojitz SOLVADIS GmbH and its affiliated legal entities to oversee, monitor, and support the effective implementation of this policy.

This Policy is subject to regular review and, where necessary, revision by the Board of Directors and the Sustainability Manager to ensure its continued relevance and effectiveness. Any material updates or amendments will be communicated to relevant stakeholders in a timely manner. Any questions regarding this Policy should be directed to the Sustainability Manager.

The Policy is also communicated to our suppliers, business partners, and customers to promote transparency and alignment with our sustainability objectives and commitments.
